

## File Handling

Basic file handling is easy. Let's see.

```
# iex
```

```
{:ok, file} = File.open "hello", [:write]
IO.binwrite file, "world"
File.close file    # Notice that we don't have file.close
```

```
# Let's read it back
```

```
{ok, contents} = File.read "hello"
```

```
# Now delete the file and then try again
```

```
{ok, contents} = File.read "hello"
```

And the usual Path.join works here as well.

```
Path.join("foo", "bar")
Path.expand("~/hello")
```
